SailPoint

SOLUTION BRIEF

Making Security Incidents Actionable
with SailPoint and Cortex XSOAR

paloalto NETWORKS

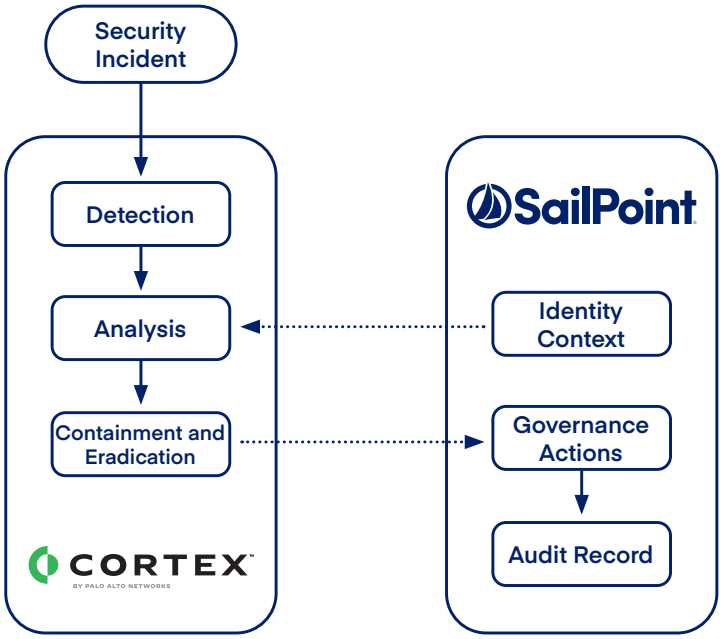
The necessity to embrace digital transformation has brought on many innovative opportunities as well as many challenges for today's enterprises. According to the **State of Applications Service Report**, 88% of organization are multi-cloud but most still struggle with security. With the explosion of cloud, applications, data and users to manage, the majority of enterprises are at risk because of their inability to effectively control and govern their users' access in their environments.

In order for organizations to overcome these internal and external threats and gain full visibility into their environments, they need to understand the risks associated with users' access and security incidents. Without understanding these factors, enterprises are open to significant data breaches. With a data breach costing on average $3.86 million in 2020 according to **IBM and the Ponemon Institute**, assuming this risk is not only negligent but extremely expensive. The average time to contain a breach according to the same report is 280 days, meaning it will take three quarters to even get a understand of what happened and how to move forward. With the total impact a single breach costing millions of dollars and countless hours spent on incident analysis and mitigation, enterprises need to understand Identity and security events and alerts simultaneously.

So how does an organization take all this security data, incorporate identity context, and make it actionable?

To more accurately address these potential security threats and minimize associated costs, organizations need to embrace the power and ease of SailPoint, the leader in Identity Security and Palo Alto's best of breed security orchestration product, Cortex™ XSOAR. This innovative integration delivers a seamless view of security incidents combined with enhanced information around users, their access and risks associated, known as identity context to drive automated remediation. Allowing security incidents to be more identity-aware and provide direct mechanisms to mitigate a security threat through active identity governance actions. Together our integrated solutions provide our mutual customers the ability to:

- Enrich security incident response by incorporating identity context
- Provide actionable responses to identity-based security attacks
- Mitigate risk by identifying incident-based events



SailPoint Identity Security joins together in-depth identity context and governance actions while Cortex™ XSOAR provides a powerful combination of security monitoring and incident response. Together this is gives security operation centers the power to incorporate identity-aware context into their incident response lifecycle. Our powerful integration helps enterprises:

- Provide security analysts more insight into end-user related security incidents.
- Enables automatic remediation actions of identities and accounts involved in a security event such as immediate disablement of file sharing access in response to a DLP incident.
- Generates new security incidents in the orchestration platform based on in-depth identity context.

SailPoint Identity Security and Palo Alto Networks Cortex™ XSOAR provide a powerful combination of security and governance giving enterprises the ability to make informed and actionable decisions in addition to mitigating risk. Now enterprises can embrace their digital transformation agenda's and goals with peace of mind.

ABOUT SAILPOINT

SailPoint is the leader in identity security for the cloud enterprise. We're committed to protecting businesses from the inherent risk that comes with providing technology access across today's diverse and remote workforce. Our identity security solutions secure and enable thousands of companies worldwide, giving our customers unmatched visibility into the entirety of their digital workforce, and ensuring that each worker has the right access to do their job – no more, no less. With SailPoint as foundational to the security of their business, our customers can provision access with confidence, protect business assets at scale and ensure compliance with certainty.
