

WE MONITOR YOUR NETWORK NON-STOP FOR THREATS

GUARDIAN360 | THE NUMBER 1 CENTRAL SECURITY PLATFORM

Your IT infrastructure is essential to your operation. This means that protecting your IT infrastructure is of the utmost importance. There is no such thing as 100% security, but we can help you reduce the risks by identifying potential threats in an early stage and acting quickly if things do go wrong. We do that by using our Guardian360 central security platform. We refer to this as managed security. For you, it means a good night's rest.

GUARDIAN 360°

WHY GUARDIAN360?

Vulnerabilities change on a daily basis and come from external sources as well as from the internet. It is virtually impossible to monitor everything yourself and an annual penetration test is often insufficient. That's why you should start using the Guardian360 platform today!

The Guardian360 platform offers unrivalled insight into the security of your applications and IT infrastructure. This central security platform makes use of the 360-degree Threat Vector Analysis we developed ourselves. We secure from the outside in and check your network from the inside out.

SECURITY AS A SERVICE

We scan over 80 different network ports every hour and we scan for over 60,000 threats daily. Everything in and around your network is checked and evaluated.

Because vulnerabilities change daily, we ensure quick detection and we act immediately when necessary. We identify inconsistencies very quickly by comparing results with previous scans. When a potential threat is detected, an incident is reported to our Security Operations Centre immediately, following which our engineers spring into action.

WE SUPPORT YOUR COMPLIANCE

We also test threats against different standards (including ISO27002:2013 and NEN7510). This ensures you always have insight into your compliance, without having to do anything yourself. If required, we can provide you with an honest appraisal in which we outline recommendations for improvements in simple language. We can also assist you with implementing recommendations, or taking action proactively. In addition, we conduct scans and tests without slowing down your IT infrastructure, so you are always able to continue with your daily business activities.

THIS MAKES GUARDIAN360 UNIQUE:

| GUARDIAN360 SCANS CONTINUALLY:

Your IT and application environment changes daily, and so do external threats. This is why Guardian360 scans every hour of every day. Naturally, this is done non-intrusively.

| COMPREHENSIVE SCANNING ARSENAL:

We utilise open source as well as highly efficient scanners we developed ourselves and examine servers and sites from different perspectives.

| CLEAR MANAGEMENT DASHBOARD:

We convey the results in plain language. You can see immediately how our SOC wards off threats for you.

| YOUR INTERNAL NETWORK IS ALSO SCANNED:

Because threats are not limited to external sources, a special Guardian360 probe scans your local (office) network. This probe sends all kinds of information securely encrypted to the Guardian360 platform.

| GUARDIAN CANARY:

If a network intruder or hacker should access your network despite all the security and scanning measures, our 'Canary' activates a silent alarm. The 24x7 Security Operations Centre (SOC) will then immediately identify any intruder or hacker!

| PASSWORD AND CREDENTIALS SCANNER:

If Guardian360 finds files that are password protected, the Guardian360 Cruncher tries to crack these. This way, you will identify weak passwords before a hacker does!
