## RULE- AND BEHAVIOR-BASED ANALYTICS

## NETWORK DETECTION AND RESPONSE (NDR)

### Product Description:

By combining rule- and behavior-based analytics, ExtraHop Reveal(x) can help IT and Security teams to rise above the noisy solutions to identify real threats, faster as well as automate data gathering and correlation for a radically more efficient investigation workflow.

Reveal(x) is the industry leader in Network Detection and Response (NDR), with enterprise-class network traffic analysis that helps you detect suspicious behaviors, prioritize investigations into the highest risk threats, and automate response.

Many organizations have been transitioning to a (partially) remote workforce for years, but the rapid spread of the pandemic COVID-19 has forced a shift to remote access on a massive scale. IT and security teams must now ensure that critical systems remain available under unprecedented demand, as well as defend those same systems against hackers ready to prey on a huge increase in unsecured devices and (home) networks. By prioritizing collaboration, visibility, and automated investigation and response, you can reduce friction between teams and stabilize your footing in this new reality. ExtraHop Reveal(x) helps enterprises of all sizes manage and secure remote access through network detection and response (NDR). With unified visibility across on-premises, cloud, and hybrid infrastructures and advanced machine learning that ensures accurate, actionable detections, Reveal(x) makes it easy for teams like yours.

### Benefits:

- Terminate non-compliant VPN connections
- Solve Remote Access and VPN issues
- Correlate Performance Across Tiers
- Enforce Remote Access Tool Policies
- Understand Resource Utilization
- Spot and Investigate Suspicious Logins
- Monitor and Secure Active Directory

# <) FORESCOUT®

SECURELY  
MAINTAIN BUSINESS  
CONTINUITY  
WITH A REMOTE  
WORKFORCE

FORESCOUT DEVICE  
VISIBILITY & CONTROL  
PLATFORM

## Product Description:

As businesses worldwide scramble to adapt their cybersecurity protocols and support today's expanded mobile workforce, bad actors are stepping up efforts. Attacks are on the rise as IT organisations focus on maintaining secure business operations.

Gain complete visibility and control of remote devices to protect your organization while employees work from home.

## Benefits:

### Discover and identify all remote devices:

Beyond user and VPN authentication, it is essential to be able to identify devices and also categorise them as corporate-issued or personal. Forescout helps:

- Identify devices in real time-even VPN-connected devices
- Keep devices off your network that shouldn't be there
- Block unsanctioned BYOD systems

### Extend compliance to remote devices:

Given the lax security on most home networks, device hygiene is paramount. Essential posture checks must occur before allowing devices on the corporate network. Forescout helps:

- Check if security agents, device patches and software are up to date
- Remediate noncompliant devices within the remote network
- Enforce access controls based on policy

## Continuously monitor traffic:

Continuous traffic monitoring and policy enforcement are essential to prevent cyber incidents. Best practices, such as least privilege access, must be enforced. Forescout helps:

- Monitor devices that connect through VPNs
- Alert users of compliance issues automatically
- Terminate non-compliant VPN connections

## Moving Beyond VPN to Secure Your Remote Workforce – Register to watch the Webinar:

Improve visibility and control of remote devices to reduce risk while employees work from home.

# FORTINET®

FORTIGATE NEXT  
GENERATION  
FIREWALL +  
FORTITOKEN /  
FORTICLIENT OR  
FORTICLIENT EMS

Securing the Remote  
Workforce with FortiGate  
Next Generation Firewalls

## Product Description:

As part of the FortiOS operating system that resides on FortiGate firewalls, Fortinet have bundled IPSEC client to Site and SSL client to site VPN connectivity. This built-in capability allows remote access security and functionality to be scaled up in one of 3 ways.

FortiClient (free version) provides VPN Connectivity to the FortiGate with password and user ID FortiTokens offer a more secure solution allowing a remote worker to securely connect in to an existing FortiGate and authenticate themselves into the network using two factor authentication.

FortiClient EMS offer full endpoint control by unlocking the full potential of the UTM features built into the FortiClient software which includes Antivirus with Cloud Sandboxing, Web filtering, Firewall (Application Control) and Vulnerability Scanning.

## Benefits:

### FortiClient

- Free to download and ideal if you are just looking to use the VPN elements of the client software.

### FortiToken

- Offers a more secure solution, available in both physical and software mobile form
- Reduced costs by leveraging existing FortiGate as the authentication server.
- One-time purchase with no additional licensing required
- Minimised overheads with unique online activation option

- Available at 40% discount

### FortiClient EMS

- Offers Full endpoint control
- Configurable so user cannot change settings and to start VPN on boot up safeguarding the device from split tunnelling
- Easily scalable with additional licenses
- Available at 40% discount

These products provide an immediate solution and are part of the Fortinet Security Fabric platform which delivers broad, integrated, and automated protection across the entire digital infrastructure. For more information on Fortinet solutions that address your specific remote working and business continuity needs, please get in touch.

# BLOXONE™ THREAT DEFENSE

Infoblox can help protect you and your customer's network when working from home. Infoblox are extending BloxOne™ Threat Defense Cloud service free for 90 days. This offer is available to you as an Infoblox partner and well as your customers

## Product Description:

BloxOne Threat Defense leverages the power of core network services to provide a foundational layer of security for on-prem, cloud and cloud-hybrid networks. Use it at this critical time to streamline and automate threat response and create a secure user experience that does not impede the user's ability to work.

## Product Benefits:

- Detects and blocks phishing, exploits, ransomware and other modern malware that could compromise remote workers' devices, data, and credentials
- Prevents data exfiltration over DNS, keeping protected data safe
- Uses a recent innovation to monitor for lookalike domains that could be on the rise and compromise valuable internet properties
- Enable your customers to consistently manage their security across every business location
- Restricts user access to specific web content categories and helps track activity
- Automates incident response so security ecosystems can remediate incidents quickly

**Expand Your BloxOne™ Threat Defense Deployment with No End-User or License Restrictions for 90 Days!**

## XI FRAME

Run Any Software in a  
Browser

### Product Description:

Deliver virtual apps and desktops to users worldwide with Xi Frame. Either in the cloud with AWS, Microsoft Azure or Google Cloud Platform. Or on-premises with Nutanix AHV

Frame is a Desktop-as-a-Service (DaaS) solution that lets you access your apps on any device and from any location. Easily create virtual workspaces for your customers in under an hour.

Deliver virtual apps in 5 easy steps:

1. Pick your infrastructure
2. Pick your Apps
3. Integrate your authentication
4. Integrate your cloud storage
5. Access on any browser!

### Benefits:

- With Xi Frame, you can get your customers end users working from anywhere in under an hour
- Deliver a secure and responsive access to applications, desktops, and data instantly from any device or any location at unlimited scale
- Faster time to value and removes the barriers to deliver and consumer virtual desktops and virtual apps

### Use cases:

- Create an excellent user experience at scale
- Deliver always-on availability and security
- Deploy and provision desktops in under an hour
- Enable office apps, design, CAD, 3D Modeling, animation, gaming - no plugins required
- Pick between Google, Microsoft Azure, AWS, and Nutanix
- Improve efficiency and day-to-day management

## PRISMA ACCESS

Secure Access Service Edge  
(SASE)

### Product Description:

Prisma Access is a Secure Access Service Edge (SASE) that helps organisations embrace cloud and mobility by providing network and network security services from the cloud. With an increasing number of users, branch offices, data and services located outside of the protection of traditional network security appliances, organisations need a cloud-based infrastructure that converges network and network security capabilities. Prisma Access provides consistent security services and access to cloud applications (including public cloud, private cloud and SaaS) delivered through a common framework.

### Benefits:

Prisma Access delivers the networking and security that organisations need in an architecture designed for all traffic, all applications, and all users. Rather than creating single purpose technology overlays that are normally associated with point products, Prisma Access uses a common cloud-based infrastructure to deliver security services, including advanced threat prevention, web filtering, sandboxing, DNS security, credential theft prevention, DLP and Next-Generation firewalling.

### Business Agility and Speed:

- Organisation positioned to transform towards a modernised IT environment
- Organisation can grow, expanding to new locations regionally and globally to capitalise on new initiatives
- Streamlined operations increases competitive advantage, reduces costs, increases profits

### Reduces Complexity:

- Eliminate unnecessary, limited use point products
- Operate from the cloud to cut operational complexity and cost
- Avoid logistical issues with shipping, installing and upgrading hardware

### Consistent Security Designed to Stop Cyberattacks:

- Consistent security policy strengthens the organisation's risk profile
- Provides full visibility and security for all traffic
- Delivers protection to users in any location
- Delivers protection to all applications (public cloud, private cloud, SaaS, internet)

To find out more about this solution, please contact a member of the Palo Alto Networks team:

PROOFPOINT META

Secure Remote Access Made  
Easy

### Product Description:

Proofpoint Meta is the zero-trust alternative to VPN for secure remote access to any enterprise application, anywhere. As applications move to the cloud and workers are increasingly mobile, IT teams need a better approach to providing secure application access than the conventional, site-centric VPN. Proofpoint have created a software-defined perimeter (SDP) and are delivering network security from the cloud.

### Benefits:

- Your customers will be able to implement remote access for workers within two hours of reaching out to you and Proofpoint
- Help your customers fulfil their business continuity strategy with the best possible solution on the market
- Help your customers overcome VPN issues such as exposing your DNS and IP address to the internet, poor application performance, poor user experience and too much access for the wrong staff

Contact

NEVER TRUST,  
ALWAYS VERIFY

VPN, SDP, SSO, MFA, NAC and  
ADC technologies

## Product Description:

Pulse seamlessly and securely connects users to corporate applications and resources regardless of where they exist – in the data center, public cloud or private cloud. Their integrated Secure Access portfolio combines: VPN, SDP, SSO, MFA, NAC and ADC technologies delivered as point solutions or suites to address a broad array of business requirements. Never Trust, Always Verify is their motto. Pulse Secure's Zero Trust framework ensures that the mobile workforce is authenticated, authorized and secure when accessing their applications and resources in the data center and/or cloud. The user experience is simple and seamless, while administrators gain robust management, interoperability, and granular controls.

## Benefits:

- Simply blend public cloud services and data center application access
- Simple, integrated user experience from the device of choice
- Single-pane-of-glass secure access management and operational visibility across on-premises and cloud
- 80% of Fortune 500 trust Pulse Secure by protecting over 20 million endpoints
- Granular control over who is accessing what, from where, when, and how
- No matter what the device users choose, they'll get the same streamlined user experience

## SENTINELONE CORE

SentinelOne Offers Free Platform Access to Help Enterprises Embrace Secure Remote Work and Stay Protected

### Product Description:

SentinelOne, the autonomous cybersecurity platform company, announced today that it is making SentinelOne Core available free of charge, enabling enterprises to secure remote work as the world combats COVID-19. SentinelOne will be available for free beginning Monday, March 16 through Friday, May 16, 2020. SentinelOne protects enterprises of all sizes with AI-powered cloud native technology that autonomously identifies and defeats cyberattacks – deployable in seconds.

**SentinelOne Core:** AI-powered prevention, detection, and automated response in a single, autonomous lightweight agent; legacy antivirus replacement across Windows, Mac, and Linux operating systems with no connectivity or network dependency.

### Benefits:

- SentinelOne is offering enterprises as many Core licenses as they need, without limits and free of charge, giving you the chance to get in front of your customers immediately
- By providing enterprises with Core, it is essentially running a POC. The likelihood of the customer removing it post the expiration date is low, therefore giving you the opportunity to secure their business with the potential to also upgrade
- SentinelOne's Core offers Prevent, detect (basic) and respond capabilities along with reporting

MAJOR TECHNOLOGY  
PLATFORM MAKING  
AUTHENTICATION  
EASIER AND FASTER  
TO DEPLOY

Authentication

## Product Description:

SecurEnvoy provides SecurAccess. SecurEnvoy is one of the few providers of secure solutions that offer the freedom and flexibility with hosting options to suit any business needs. On-premise, in the Cloud or a hybrid option. It's your choice, without compromise. Additionally, deployment efficiency at scale that reduces the costs of implementation and supporting the authentication platform. Their solutions is designed by a team that understands the increasing demands on security infrastructure. They integrate with every major technology platform making authentication easier and faster to deploy.

## Benefits:

- Custom branded authentication
- No hardware authentication devices required
- Cost savings with password resets
- Deployment in minutes via wizard

# THALES

## SAFENET TRUSTED ACCESS

Cloud-based Access  
Management as a Service

### Product Description:

Thales (formerly Gemalto / Safenet) is one of the largest authentication and encryption security companies in the world and delivers their identity and data security solutions to organisations and market leaders globally.

With more organisations shifting to a remote working framework for the foreseeable future it is more important than ever to educate and assist organisations on effective ways to keep their employees and business assets safe from opportunistic hackers.

As you are probably already aware, one of the challenges faced by organisations is how to deploy efficient controls to provide employees with a secure and convenient access to their digital workplace. Therefore, enforcing a secure identity verification is essential to protect organisation's assets and the employees.

Building on Thales's award-winning authentication service, SafeNet Trusted Access (STA) combines authentication and access management in a fully integrated cloud service. Thales enables customers to transform their business and operate securely in the cloud by preventing data breaches, simplifying access for users, and enabling compliance.

### Benefits:

1. Speed of deployment: A cloud-based service means your customers are up and running within a day
2. Secure Access: Customers gain secure access to VPNs, remote desktops, virtual environments and cloud-based services such as SFDC and O365

### Help your customers to:

#### Prevent breaches:

- Apply different MFA methods
- Control access for each application
- Eliminate passwords

#### Enable Cloud Transformation:

- Speed up cloud migration initiatives
- Secure cloud adoption
- Take an agnostic approach to security

#### Simplify Compliance:

- Track who is accessing which application, when and how
- Easily prove compliance
- Remain compliant as you grow your environment

**Thales now offers Safenet Trusted Access (STA) free for 30 days! The free 30-day trial of STA includes:**

- 10 free Mobilepass tokens, 2 SMS tokens
- Cloud Single Sign-On
- Built-in integration templates
- Customisable access policies
- Dashboard of access statistics

For more information visit our STA product information

## TINTRI VMSTORE

Maximum Performance for  
Applications and the People  
Who Manage Them

### Product Description:

The Tintri VMstore appliance is designed from scratch to fully exploit flash technology for virtual environments.

VMstore keeps users productive, effectively handling boot and login storms, desktop updates, and performance-hungry applications.

### Benefits:

- Simple Deployment - Packaged as a hardware appliance, Tintri VMstore™ goes from box to rack and running VMs in a matter of minutes.
- Intuitive Administration - built on an application-aware storage architecture and allows administrators to increase productivity by directly working with vDisks and VMs
- Plug & play scalability - scaling to support thousands of desktop VMs is easy and cost-effective—just add more VMstores
- Industry-best virtual desktop density - With its unique FlashFirst™ design, a single Tintri VMstore supports up to 2,000 virtual desktops with high performance and consistent sub-millisecond latency.
- Full support for VMware Horizon View and Citrix XenDesktop - Tintri VMstore has undergone rigorous testing to ensure comprehensive support for major VDI platforms

## SECURECLOUD

SecureCloud is a major new addition to the Tufin Orchestration Suite, the only platform that unifies security policy management across on-premises, cloud-native, and hybrid clouds

### Product Description:

Tufin SecureCloud revolutionises cloud security. Companies no longer need to compromise agile for secure, or secure for agile. Leverage SecureCloud's policy-centric automation-based approach to secure your journey to the cloud. Gain confidence knowing your cloud-native, hybrid cloud, and Kubernetes applications are properly configured and secure.

### Benefits:

- Visibility and control
- Fast detection and mitigation
- Shift-left network security
- Generate, test and enforce micro segmentation
- Ensure continuous compliance
- Enable a zero-trust security model
- Accelerate cloud adoption and digital transformation without compromise

### Secure Cloud Free Access & License Expansion for Existing Tufin Customers:

Tufin is a company that values supporting our customer relationships, understand times are tough and want to help alleviate some of the additional burden being sustained. With the increased reliance on remote workers, cloud app utilisation has surged, exacerbating cloud security challenges, and VPN requirements have surged requiring an increase in firewalls.

To help our customers in this time of need Tufin is providing free access to Tufin SecureCloud to provide immediate cloud visibility, and is offering a free license expansion to waive the fees from this temporary period of non-compliance. We value your business and hope these offers can make your life a little easier.
