

# The Future of Security and Compliance Starts Here

Digital transformation has opened up opportunities for greater agility and growth in today's modern enterprises. But it's also introducing challenges. Digital transformation means more users, more apps, and more data – and if not properly addressed, also means more risk.

#### **What does risk look like?**

- Activity during a merger or acquisition
- Rapid adoption of new cloud apps
- Unknown sensitive data being stored in the cloud
- Non-traditional users (like bots) who still need to be monitored

The good news is SailPoint can help alleviate – and even avoid – this risk by helping you secure your entire enterprise.

#### **This starts with knowing and controlling:**

- Who has access to your applications and files
- What they can do with that access
- How that access is being used

# Step into the Future of Identity

**SailPoint Predictive Identity™** is our innovative approach that enables identity to be autonomous while you stay in complete control.

Using the power of AI and machine learning, it learns and adapts to your business, provides advanced governance capabilities that remove complexity, and makes identity easy!

- Get insight into users with potentially risky or abnormal access.
- Receive recommendations if access should be granted or not.
- Get suggestions on low-risk manual processes that can be automated so IT can focus on high-risk matters.

## **Govern All. Govern Deep. Govern Smart.**

### **Govern All**

Connect and govern access to every part of your organization's hybrid IT environment, whether it's on-premises or in the cloud. Our predictive identity governance platform gives you the full visibility and control you need:

- **Users** – Quickly identify and implement roles to easily govern employees, contractors, partners, vendors, and bots.
- **Applications** – Rapidly bring all cloud, legacy, and proprietary apps under governance.
- **Files** – Discover where sensitive data is stored and apply controls to ensure only the right people can see and access it.

### **Govern Deep**

Govern access within large mission-critical applications such as AWS, SAP, and Salesforce. Policies such as separation-of-duties enforce what information your users can see and touch.

### **Govern Smart**

Using the power of AI, SailPoint Predictive Identity™ provides recommendations to help you make intelligent access decisions. Spot risky users, support continuous compliance and receive recommendations for identity tasks that can be automated.

## SailPoint Predictive Identity™ Governance Platform

### Flexible Deployment Options

SailPoint provides you the flexibility to deploy in a way that best meets your digital transformation needs:

- From the cloud as a multi-tenant SaaS solution
- On your organization's own Amazon AWS or Microsoft Azure instances
- As a cloud managed service supported by SailPoint or our certified partners
- From your dedicated data center or private cloud

### Our Industry Leadership

SailPoint maintains the highest leadership position across all major analyst reviews and maintains a 95%+ customer retention rate across all industries.

### Enterprise Scalability

Built to govern millions of identities, billions of points of access, and tens of thousands of applications and data sources.

### Integrations & Connectivity

100+ connectors providing complete bi-directional connectivity to 99% of on-premises and cloud applications and data.

*We partner with top technology vendors to provide easy out-of-the-box integrations and connectivity.*
