

## Infinipoint Copy Blocks

### 50 WORDS:

Infinipoint's pioneering Device-Identity-as-a-Service solution, addressing Zero Trust device access and enabling enterprises of all sizes to automate cyber hygiene and increase visibility across their entire IT estate. They are the only solution that provides Single Sign-On (SSO) authorization integrated with risk-based policies and one-click remediation for non-compliant and vulnerable devices.

### 100 WORDS:

Infinipoint pioneers the first Device-Identity-as-a-Service solution, addressing Zero Trust device access and enabling enterprises of all sizes to automate cyber hygiene and increase visibility across their entire IT estate.

With most of the workforce working from everywhere accessing remote services. While the user is authenticated, the network is encrypted and the SaaS app is secured, the device is often overlooked. It's no use authenticating users on a vulnerable device, allowing them to access your sensitive data & services.

Infinipoint is the only solution that provides Single Sign-On authorization integrated with risk-based policies and one-click remediation for non-compliant and vulnerable devices.

### 200 WORDS:

Infinipoint pioneers the first Device-Identity-as-a-Service (DaaS) solution, addressing Zero Trust device access and enabling enterprises of all sizes to automate cyber hygiene and increase visibility across their entire IT estate. It acts as one enforcement point for every enterprise service. Enabling controlled access based on user-device-service, applying real-world based risk intelligence to enforce static and dynamic policies.

Today, most of the workforce is working from everywhere accessing remote services. While the user is authenticated, the network is encrypted, the SaaS app is secured but the device is overlooked. Hence, it has become the weakest link in the organisation's IT security. It's no use authenticating users if they're on a vulnerable device, and allowing them to access your sensitive data & services.

Infinipoint is the only solution that provides Single Sign-On (SSO) authorization integrated with risk-based policies and one-click remediation for non-compliant and vulnerable devices.

Their solution provides the missing "device piece" of the zero-trust security model, as guided by Gartner, NIST and Google (the inventors of BeyondCorp zero-trust) internal best practice. Their platform delivers true business outcomes by protecting access to your organization's data & services while transforming your endpoints into a world-class security posture which prevents real-world breaches.
