Open Books Announcement

ExtremeCloud IQ Controller E3125

Summary

Extreme Networks® is pleased to announce the new ExtremeCloud IQ Controller E3125. This new configuration supports dual-interface speeds of up to 100 Gbps (10/25/50/100 Gbps link speeds supported) and has been explicitly designed to meet and exceed the network demands of high-occupancy and high-throughput Venue installations. The E3125 is a High-tier model supporting up to up to 20,000 APs with up to 100,000 end-user sessions in high-availability mode. The unit ships with one pre-installed power supply (1300W). Redundant power supply can be purchased separately.

The ExtremeCloud IQ Controllers host a fourth-generation orchestration application offering all the mobility services required for modern unified access deployments. The ExtremeCloud IQ Controllers include on-premises comprehensive critical network services for wireless and wired connectivity, wireless device secure onboarding, distributed and centralized data paths, role-based access control through the Application Layer (Layer 7), integrated location services, and IoT device onboarding through a single platform. The modern embedded operating system supports containerization of applications enabling expansion for value-added applications for the unified access edge.

The ExtremeCloud IQ Controllers E3125 offers the ability to expand capacity to meet and exceed very large and high-capacity Venues. The hardware and virtual packages are available for purchase using a traditional CAPEX model. Capacity licenses per managed device are available via ExtremeCloud IQ Pilot or Navigator subscription licenses. The best-in-class simplified universal licensing model provides not only on-prem wireless orchestration, but it also enables integration with ExtremeCloud IQ Site Engine and ExtremeCloud IQ for scalable visibility, monitoring, and reporting across multiple deployment sites.

The E3125 will start shipping by July 7, 2023
