Tanium: The Platform for Business Agility, Efficiency and Speed

A centralized, cloud-native endpoint management and security platform offering a single pane of glass with real-time access to endpoints without the cost and complexity of traditional tools.

Find, Fix and Prevent IT Issues Quickly

The distributed nature of today's business networks makes achieving endpoint visibility and control extremely challenging. Organizations must manage a growing variety of software and endpoints, including laptops, mobile devices, servers, virtual machines, containers, cloud infrastructure and more.

Modern, digital businesses need to be ready for whatever comes next, but often:

- Struggle with time and resource constraints
- Need to control, optimize and reduce costs
- Lack a single source of truth about the state of their endpoints
- Have no capacity to solve IT issues quickly
- Spend as much time keeping tools up to date as they do using them
- Wish they had fewer vendors to manage
- Suffer from security "alert fatigue"
- Face potential exposure to cyberthreats and vulnerabilities
- Experience breaches they're not prepared for

Avoid the Costs and Complexities of Traditional Management and Security Tools

Tanium is a centralized, cloud-native endpoint management and security platform that offers single-pane-of-glass visibility with real-time access to endpoints. It greatly reduces the costs and complexities of traditional point tools while delivering control across your endpoint environment.

The Tanium Platform creates a single source of truth to unite IT operations and security teams.

With Tanium, you can be operational in minutes to:

- Investigate and remediate security incidents with accuracy and speed
- Reduce the business impact of security breaches
- Improve overall IT hygiene and mitigate the risk of future disruptions
- Meet compliance standards to help avoid sanctions and fines
- Confidently manage and maintain the health of your devices
- Accelerate the productivity of time-strapped IT teams
- Automate routine tasks
- Integrate with and augment existing tools

Tanium is proven in the world's most technically demanding organizations.

9 of Top 10 U.S. Financial Institutions

Half of the Fortune 500

Multiple branches of the U.S Armed Forces

7 of the top 10 Global Retailers

Asset Discovery & Inventory Management Solution Bundle

See everything on every endpoint. Organizations need to answer fundamental questions about their environment with accurate, complete, and up-to-date data about all endpoints across their estate, in seconds — not hours, days or weeks.

- **See everything now:**
  Discover and inventory your entire estate with the same lightweight Tanium agent in seconds.

- **Know everything now:**
  Categorize your entire environment in minutes to confidently reclaim software and build service-dependency maps.

Client Software Management Solution Bundle

Control your IT assets with confidence. IT-Directors need a single, lightweight platform that gives them the power, in real time, to see what they own and control every asset.

- **Align teams:**
  Manage assets, discover endpoints, and deploy software without additional tools or bandwidth.

- **Fix it Fast:**
  Proactively manage endpoints by automating the installation of required patches, software, and OS updates.

About Tanium

Tanium provides endpoint management and security built for the world's most demanding IT environments. Our breakthrough approach decentralizes data collection, aggregation and distribution down to the endpoint, dramatically reducing direct client-to-server communications to deliver real-time visibility, comprehensive control, and rapid response. This is why the world's most sophisticated organizations – including nearly half of the Fortune 100, multiple branches of the US Armed Forces, and over 70 percent of top retailers and financial institutions – trust Tanium to help them confidently manage performance, detect and respond to threats, and help ensure compliance across their operations.
