

SMB Security Fabric

Cybersecurity Trends

 **43%** of SMBs lack any type of **cybersecurity defense plans**¹

 **65%** of medium businesses report having **cyber security breaches or attacks** in the last 12 months²

 **More than 30%** of SMBs suffered damage between **US\$50,000 and US\$250,000**³

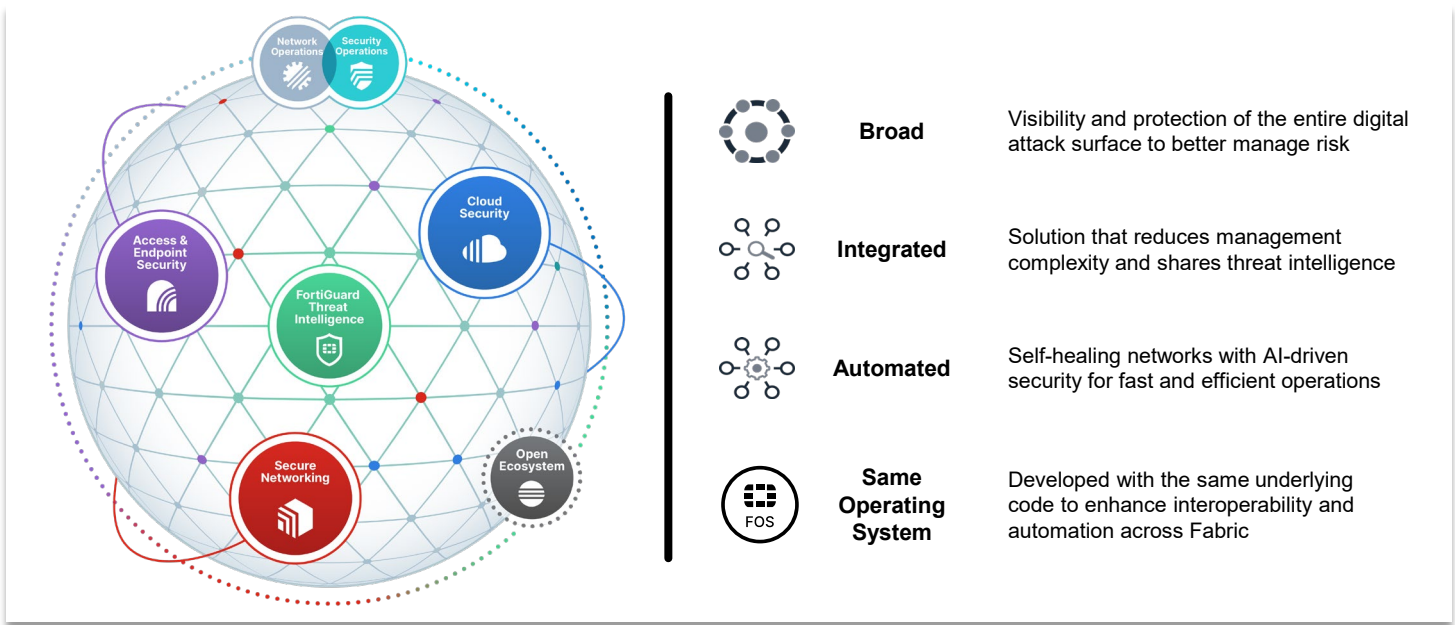

Cybersecurity Evolution – Toward a Platform

Results of deploying isolated solutions from multiple vendors:

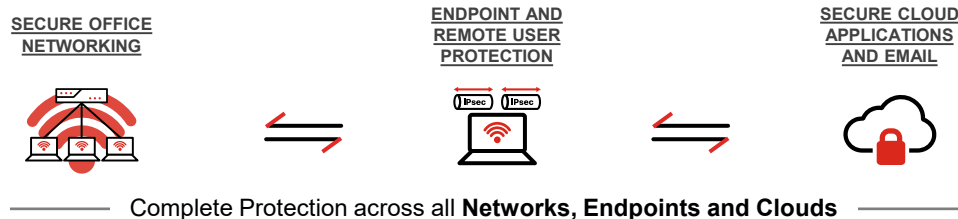

- Increased Management and Deployment overhead
- Weakened security protection
- No Threat Information Sharing between products
- No Automation

Fortinet on the other side, addresses those challenges with the **Fortinet Security Fabric**, a deeply integrated platform that covers the entire attack surface.

Powered by a single, unified operating system for simplified deployment and control, the Security Fabric eliminates conflicting policies, streamlines management, improves ability to respond to threats and reduces costs through true consolidation.

SMB Security across 3 Use Cases:
