

GET GOING

with Prisma Access Quick Start

Overview:

Fast-track your Prisma Access deployment to deliver rock-solid security to remote networks and mobile users with Exclusive Networks QuickStart Service for Prisma™ Access. The Quick Start will ramp up your implementation and align it with best practices. Exclusive Networks will guide you through the design & deployment of Prisma Access in your environment for up to 1000 remote users, to safely enable remote networks & mobile users in the cloud.

This quick start service expedites onboarding activities & shortens your time to value while following best practices.

How it works:

The QuickStart Service for Prisma Access expedites onboarding activities and shortens your time to value while following best practices. The service is delivered in four steps:

- 1) Installation:** This includes the activation of Cortex™ Data Lake and Prisma Access along with the installation of the cloud services plugin.
- 2) Configuration:** Next is proper configuration of Prisma Access, including two service connections, four remote networks, mobile user onboarding, and 10 security policies. We will also build the applicable IPsec tunnels as well as modify GlobalProtect™ app behavior, gateway routes, and access. The GlobalProtect app will be configured for pilot testing.
- 3) Validation:** Once the configuration is complete, we'll work with you to validate routing as well as perform a configuration assessment and security posture review. This includes a review of your Prisma Access and Cortex Data Lake configurations, a review of your logs and traffic flows, verified access to User-ID™ technology, and application of any configuration changes based on documented best practices.
- 4) Handover and review:** Once the implementation is complete, we'll train your team on administration and operations best practices. We'll also review findings from the assessment and security posture review and recommend next steps.

Deliverables Summary:

- Activation of Cortex Data Lake and Prisma Access along with the installation of the cloud services plugin.
- Configure up to two service connections, mobile user onboarding & 10 security policies.
- Modify the GlobalProtect app behaviour, gateway routes & access.
- The GlobalProtect app will be configured for pilot testing.
- Configuration assessment & security posture review.
- Administration handover with customer.

Prerequisites:

- 1.** An existing Panorama management system in operation. If unavailable, Cloud Managed Prisma Access will be used.
- 2.** IPv4 addressing is in use.
- 3.** On-premises or cloud-based firewall is operational with at least a single public interface and ISP.
- 4.** An internal Active Directory Server is deployed & available.
- 5.** If you are operating two firewalls at a location in high availability mode for resilience, that you configured the firewalls for active/standby operation.
- 6.** Your firewall has an operational link to the internal subnets.
- 7.** You have access to Prisma Access for users license & have the Palo Alto Networks authorisation code.
