Palo Alto Networks Hardware Recycling

Our hardware recycling service helps our Palo Alto Networks customers to operate in an ecologically responsible way.

This end-of-lifecycle management service simplifies and manages the end-of-life processes for Next-Generation Firewall and SD-WAN technology, whether from Palo Alto Networks, or from an alternative vendor as part of a switch to the Palo Alto Networks platform.

This enables you to reduce your environmental impact while delivering new technology that supports the future of security.

To enable sustainable transformation with minimal operational impact, our service follows 3 simple steps.

1) Asset Audit

To help end users to determine what Palo Alto Networks equipment can be recycled, we provide an Asset Audit to guide them through the process.

We create a clear list of assets and recommend what's suitable for our end-of-lifecycle management processes.

2) Decommissioning & Reverse Logistics

Having determined the most suitable asset list, we'll assist with secure removal of equipment from its installed environments at the end user's sites and deliver reverse logistics to the final destination.

This may be to a destruction and recycling plant, or a customer-assigned warehouse.

3) Destruction & Recycling

Waste Electrical and Electronic Equipment (WEEE) Recycling

We'll carry out WEEE recycling, certificated and in accordance with local directives for ethical disposal and destruction of electrical equipment.

Blancco Certificated Wipe, Shred & Destroy

Approved by NATO and certificated by many government bodies, Blancco secure data erasure destroys, and wipes data previously held on a device.

BioLeaching Reclamation

This process uses BioTechnology to extract the valuable rare earth materials within printed circuit boards in an environmentally friendly approach to recycling.

BioLeaching doesn't produce the hazardous waste that more common methods of material extraction create.
